Subject: Microsoft Settlement

the proposed settlement for the Microsoft Anti-trust case is bad idea. It will basically allow Microsoft to buy its way out of the situation without forcing any substantive change.
Microsoft is currently giving away free preview copies of XP in the U.S. Post Office and several shipping companies as I understand. This seems like they are using the U.S. govt as a way to promote their monopoly even as the case is being resolved.
please consider working out a different settlement.
thank you for your time.
